

JB707 Junction box

(Meets requirements of EN50131)

Advanced features including:

Screw terminals, micro-switch lid tamper and optional wall tamper

INSTRUCTIONS

Not suitable for mains operation. Only use in low voltage applications.

Cable entry can be from either end via snap-out sections, or from behind at each end or behind the circuit board. The latter will require the removal of the circuit board via the clips. If wall tamper is required in addition to the lid protection, please use the extra screw provided and insert into the hole shown. This is designed to break the circuit board irreversibly. In case of illegal removal from mounting surface, the unit will need replacing.

Important, do not overtighten this optional tamper screw.

The two terminals shown in the illustration should be used for the tamper.

All other terminals are electrically isolated.

Environmental Advice.

This product is covered by current WEEE regulations. Please consider the effect on the environment, when disposing of it. Do not put in a domestic waste bin. Only dispose of at an appointed recycling centre.
RoHS compliant.
